

# Mobile Learning Essentials

Extend the classroom and expand your possibilities with a complete solution that's focused solely on educational needs. With dynamic content filtering, simplified device management and the collaborative VLE, My Big Campus, Lightspeed Systems Mobile Learning Essentials turns mobile devices into transformative tools.

## Manage

Devices, networks, and classrooms are easily managed and organised with hierarchical policy settings that conserve IT resources, prioritise bandwidth, and more. Mobile Learning Essentials empowers teachers and IT departments through simplified management of tools and resources.

## Access

Strike the perfect balance of safety and access with a content-rich library filled with multimedia resources for every year and curriculum standard. The filtering aspect of Mobile Learning Essentials ensures that these resources are available in a truly safe environment.

## Create

Not only can students and teachers peruse curated resources, they can create their own. Lessons, portfolios, documents, assignments—the list goes on. Everything is easily created and stored in the cloud for access and reference anytime.

## Assign & Assess

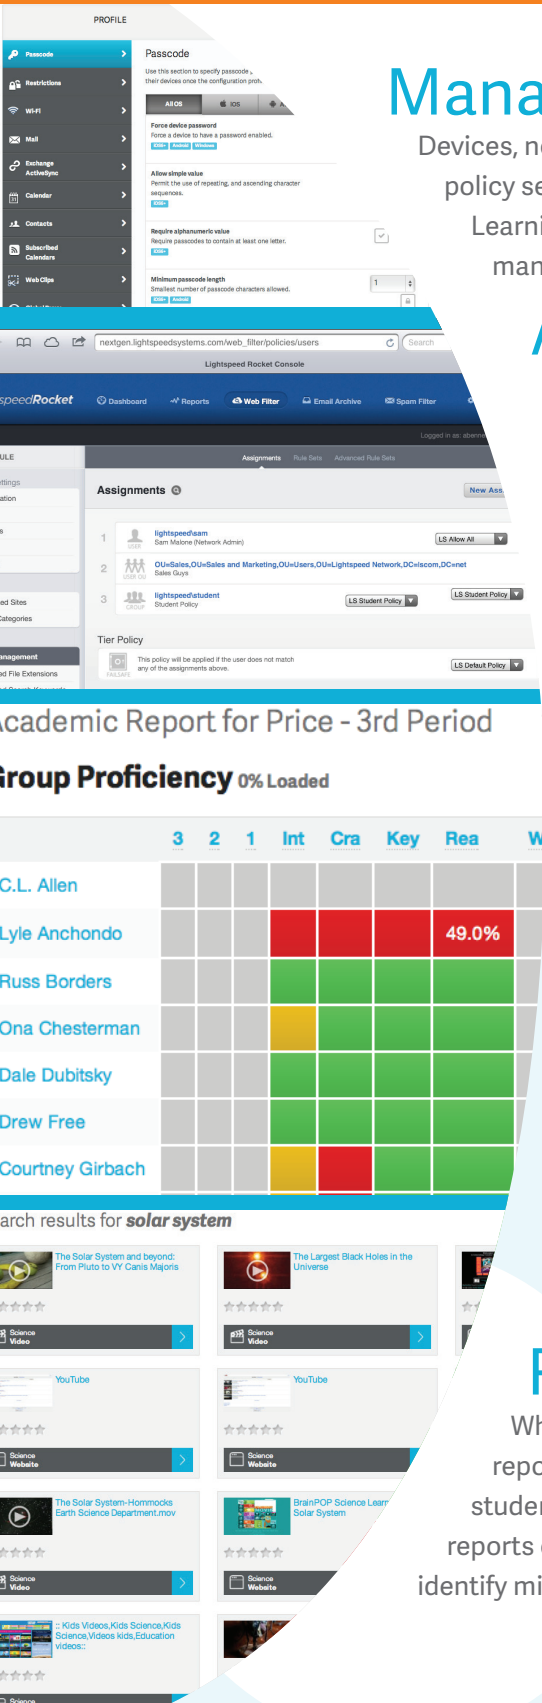

Tests, quizzes, schoolwork, and projects—assign them, grade them, and assess the results without ever leaving the program. Students receive assignment notifications immediately and can start their work right away. Teachers can tackle paperless grading when they need to, where they need to.

## Collaborate

With online collaboration, individualised groups, and an environment that makes learning fun, lessons become thought provoking discussions. Try project-based learning or student-led discussions. Why not borrow a lesson from a classroom in another county? With a safe environment that facilitates connection, the possibilities are endless.

## Report

What good are the tools if you don't know how well they work? With academic reporting, teachers can see exactly where students are struggling. Look at specific students, classes, years or even curriculum standards for insight. IT gets detailed reports on web activity, on-and off-network filtering, bandwidth management, and identify misuse.

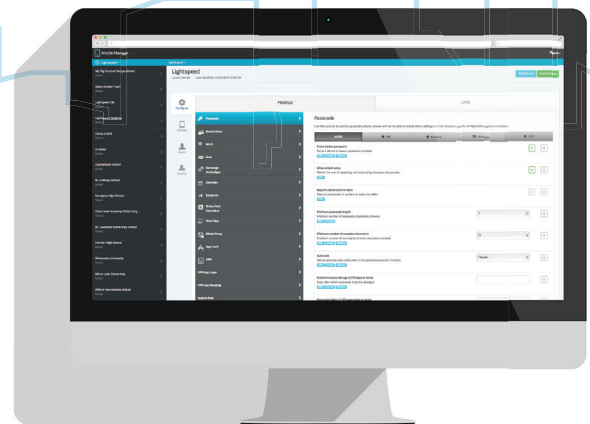

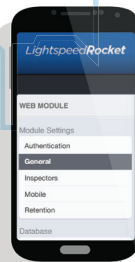

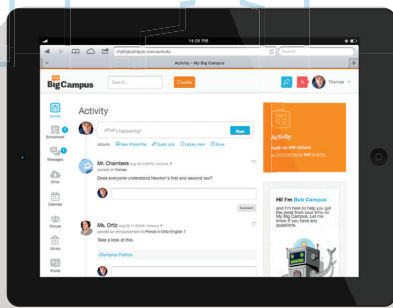

## Three Integrated Elements. One Complete Solution.

Devices can't change education on their own; Mobile Learning Essentials is the bridge between the tool and the result. Whether BYOD or school-supplied, whether it is a pilot or a full 1:1, we can help. Expand your possibilities with a filter that's about access. Emphasise creation with an VLE that's about collaboration. Simplify management with an MDM that's made for schools.

When learning is safe, mobile, and collaborative, students are engaged; teachers are empowered; parents are involved; and IT is efficient.

Your school and Lightspeed Systems—together we do amazing things.
